# Smoothwall Web Gateway Instruction Manual

Have you completed your Weatec application?
If not, here is the link to the application.
Weatec - Enrollment

Who is it for?

Smoothwall Secure Web Gateway is a hardware solution for medium to large businesses. The Smoothwall device is installed in a network environment between the ISP modem and your internal network and will filter any device connected to the network.

Pros:
- One point of management for the whole network.
- Has the option on some models for Deep packet inspection
- Can enforce Google Safe Search

Cons:
- Price
- Requires network knowledge to set up.

Note: *After testing, Smoothwall Secure Web Gateway has been approved as an acceptable content filter according to the requirements set forth in the* Weaverland Conference Electronic Technology Usage Guidelines. *Please remember that no filter can be guaranteed to filter out all objectionable content; therefore the Weatec Accountability Software must be installed on all devices in order to be in compliance with Weaverland Conference guidelines. The accountability software logs all web traffic, thus fostering brotherhood accountability. So even if objectionable content is missed by Barracuda, the content will still trigger a flag on the accountability server. Use the Weaverland Conference template as a minimum; there is nothing preventing you from choosing stricter settings.*

How to Acquire

Find more details at https://us.smoothwall.com/. To ask questions, learn current pricing, or get started with Smoothwall, call 800-959-3760
Email: inquiries@smoothwall.com , or contact page: https://us.smoothwall.com/contact/

How to Install

Work with Smoothwall or your local computer supplier to install.

How to Configure

To start have Smoothwall load the most restrictive school policy.

Since the configuration is so involved we ask that you or your IT team check your configuration after Smoothwall loads it to be sure it is in line with the Guidelines.
